

Will the broadcast flag interfere with consumers ability to make copies of DTV content for their personal use, either on personal video recorders or removable media?

I oppose the broadcast flag because it will interfere with my use of DTV content for classroom teaching purposes.

Would the digital flag interfere with consumers ability to send DTV content across networks, such as home digital networks connecting digital set top boxes, digital recorders, digital servers and digital display devices?

I oppose the broadcast flag because it will not allow broadcast video to be sent over networks for editing for classroom use.

Would the broadcast flag requirement limit consumers ability to use their existing electronic equipment (equipment not built to look for the flag) or make it difficult to use older components with new equipment that is compliant with the broadcast flag standard?

Yes, the broadcast flag will limit my ability to use our school's antiquated equipment to edit DTV.

Would a broadcast flag requirement limit the development of future equipment providing consumers with new options?

Yes. Bricolage will become more difficult.

Other Comments:

DRM will be a death knell for my teaching using television materials.
